

# CONCRETE FORMERS

When repeatability is needed, shapes aren't straightforward, surface finish, (whether matt or gloss), is important and accuracy is essential, glassfibre is probably the best available material for manufacturing formwork. If the job is of any significant scale or the timetable is particularly challenging, then Production Glassfibre is probably the most capable company in the country to partner you in the project.

Manufactured to the exact design required and compatible with proprietary formwork systems, our Formers have been used in car parks, office blocks, student accommodation, bridge piers and government buildings.

THE UK'S LARGEST GENERAL MOULDER

With modern factories in Bedfordshire, Lancashire and Fife totalling 12,000sq metres, we are uniquely capable of understanding, advising, undertaking and achieving your delivery, budget and quality criteria. Having multiple sites allows us to manufacture as close to your project as possible to ensure both a convenient contact and the most economical distribution costs. Greater buying power than any competitor results in our material procurement being the best in the industry and the efficient organising of our labour should ensure that our cost base allows us to be the most competitive option available.

Whether your requirement is for a 14mx5mx1m. concave roof in an Edinburgh University lecture theatre which we were able to make in 2 pieces for Balfour Beatty (used twice), or a Bristol car park where we delivered 180 formers of varying sizes used on each of the five floors, we have the capability and knowledge to ensure the timely delivery of product as specified to your site- anywhere in the country.

We have more experience, greater resource and (critically for a major project!) a superior Balance Sheet to any other company in the industry, and an attitude to customers which has ensured our continual growth for more than 15 years.
