

# FLEXI HOUSINGS

The Production Glassfibre Flexi Housing system is designed to eliminate most size constraints whilst still allowing the construction of a lightweight, maintenance free, structurally sound building for an infinite variety of uses. Where access is a problem, or size prohibits transport, the unit can be assembled on site and still provide a wind and weather tight structure, which looks pleasing and lasts a lifetime.

Available in single skin or fully insulated formats with a moulded external finish, these housings can accommodate any variety of doors, windows, vents and access hatches, and can be finished in any BS or RAL colour you wish to specify. Fire resistance up to BS 476 Part 7 Class 1 may be accommodated, and they may be mounted on a prepared concrete base or supplied with integrated GRP flooring.

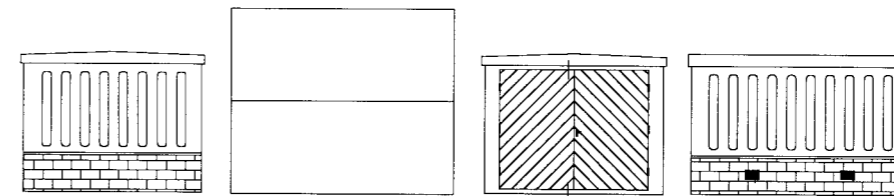

# MULTI HOUSINGS

The Production Glassfibre Multi Housing units are designed to be the most aesthetically pleasing building available, looking positively attractive and more than acceptable in even the most high profile location. Intended for a huge variety of uses, two standard sizes are available, but the modular construction method allows panels to be added up to any length within the standard widths. The contoured design

also lends itself to dual colouring, and the bottom half can be sprayed with Crystic Fireguard for use in particularly vandal vulnerable areas.

Again available with single skin or insulated walls, windows, vents, hatches, heaters, cable trays, shelves, lighting etc. can all be added to suit individual specifications, and any BS or RAL colour may be specified. Where looks matter, the Multi will be the obvious choice.

## applications

- Gas installations
- Machinery housing
- Utility substations
- Telecommunications equipment
- Transformers
- Rooftop enclosures
- Security gatehouse

## roofs

Even on a traditional brick built building, a glassfibre roof is often the most economical and practical solution. Factory built in a single piece or in as few sections as possible, custom sized to exactly fit your building, sloped as best suit your design and 'erected' in only a couple of hours, we have supplied units for both new and refurbished housings.

## applications

- Chemical storage
- Car wash equipment
- Supermarket stores
- Electrical sub stations
- Security gatehouses
- Telemetry equipment

# MINI HOUSINGS

MP1 - SOAP STORAGE

With three designs and six sizes, our range of Mini Housings is the most extensive available.

Whether storing soap at a Safeway supermarket, or sheltering switching gear at an Antrim sewage works, the products are all designed to be attractive in appearance as well as fit for purpose. One

look, either inside or out, will demonstrate a level of quality to satisfy any customer, yet as a benefit of our size, the price will probably be a surprise!

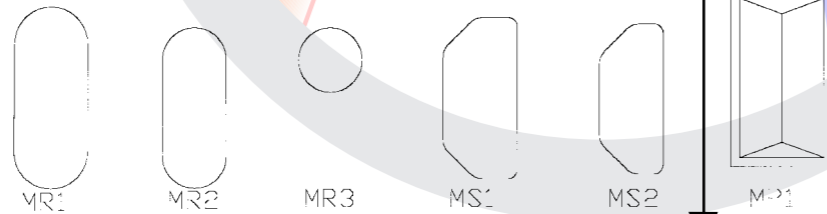

Doors are available with a variety of locking systems, and the housings are fixed by rawbolt or resin anchor through the floor (or flanges) to a prepared concrete base.

MR2 - TELECOMMUNICATIONS EQUIPMENT

MR3 - GATE SECURITY SYSTEM

GAS HOUSING

INSTRUMENTATION

Even if you need a size or style which our extensive standard range does not cover, we will be able to manufacture units from your drawing or instruction. The examples show one unit which protects instruments from the extremes of weather, while the other houses gas company equipment.

custom

applications

- Acoustic enclosures
- Control equipment
- Electronics
- Flammable gas & liquids
- Switchgear
- Generators

# HOUSINGS

Every utility company needs them and every civil engineering or building contractor utilises them, so Production Glassfibre, the country's largest general GRP moulders, have designed three ranges of housings to suit most applications.

The wide range of styles available should accommodate any aesthetic and size requirement, and being made in glassfibre, any colour may be specified or any corporate identity replicated. The housings can be single skin or fully insulated units, and many options of internal fittings and electrical equipment are available to accommodate specific customer requirements.

The housings are corrosion resistant, require no maintenance, and compared to steel equivalents, are lightweight and easily transportable. The fire resistance rating of the standard products meets BS476 Part 7 Class 2, and higher specifications are available.

FLEXI

MULTI

MINI

Our Mini, Flexi and Multi systems cover most applications, but should another style or size be required, Production Glassfibre can design and manufacture custom units to meet your unique specifications. With CAD capability and a comprehensively equipped pattern making shop in both factories, turn around time will probably be quicker than anticipated, and the quality will be at least as good as our standard units.
